Configuring an iPhone for wireless connectivity
Mike Whyment and DIT Documentation Team. Updated July 2012 (Reviewed August 2014).

Use these guidelines to manually configure an iPod Touch and 3G iPhone or later. Software must be version 2.0 or higher; to check what version you are running, from Home screen, tap Settings > General > About > Version. An automatic configuration tool is also available via our wireless-help network. You might like to try this first.

The screenshots in this guide were taken from an iPhone running version 2.1. Other software versions may display different options and icons.

1. Setup connection

- From the Home screen, Tap Settings
- Tap Wi-Fi

2. Authentication

- Type in your University username@abdn.ac.uk and Password
- Tap Join
- Wait for the Certificate prompt to be displayed
- Tap Accept to accept the certificate
- The Wi-Fi Networks screen show eduroam as connected ✓
- Press the Home button
