Global Health & Management

Master of Science/Postgraduate Diploma MSc/PgDip

www.abdn.ac.uk/study
The programme begins with cross-disciplinary Public Health Research training (Applied Statistics, Epidemiology, Qualitative Methods, Health Services Research and Systematic Reviewing) followed by courses on Health Systems and Policy, Managing for Health and Global Health. Global Health topics include:

- Poverty and hunger
- Gender and health, sexual and reproductive health
- Infectious and non-communicable diseases
- Disability and mental health
- Health financing and donor funding
- Health care for humanitarian crisis and in conflict settings.

**CROSSING BOUNDARIES:** Students learn about key issues and debates, and how these intersect with broader structural issues. The aim is to develop multidimensional views of global health for more effective impacts in the field.

**ENHANCING EMPLOYABILITY:** Professional development is offered through placements with public, civic, voluntary, development sector organisations and government agencies. The placements enhance the employability of students by applying academic skills in work-based environments.

**APPLIED RESEARCH:** Research (thesis) projects allow students to develop deepened knowledge into current research and methodological development in selected area(s). With supervision from active researchers, students develop research ideas that represent novel contributions according to accepted codes of practice and professional conduct.

**THE CUTTING EDGE:** The programme is rooted in our international research collaborations, locating our teaching at the cutting edge of knowledge and practice. Students benefit from teaching and supervision provided by world-class scholars, allowing students to participate in global research networks.

Students finish the programme with a through, critical understanding of the field, as well as insights into their own areas of interest and personal development.

**CAREERS:** Graduates of the MSc Global Health and Management programme establish careers in a range of health and development organisations and institutions, these include:

- Governments, donor agencies, multilateral and bilateral organisations in advisory roles for global, regional, national and sub-national health policy and planning, governance and administration;
- Academic institutions in social and health sciences including epidemiological and health systems and services research, development studies, sociology and political science;
- International and national not-for-profit non-governmental service organisations;
- For-profit and not-for-profit consultant organisations;
- Civil society, advocacy and faith-based organisations
