Public Bodies Climate Change Duties Compliance Reporting Template 2021/22

1.Overview

This template is provided for public bodies required to report annually in accordance with the Climate Change (Duties of Public Bodies Reporting Requirements) (Scotland) Order 2015, as amended by the Climate Change (Duties of Public Bodies: Reporting Requirements) (Scotland) Amendment Order 2020 which took effect for reporting periods commencing on or after 1 April 2021.

2. Guidance

- 1. Please save-as this workbook with your organisation's name in the title before completing
- 2. Question 1f must be completed to ensure the correct emission factors are applied in Q3b,
- 3. If you need to add more rows please email the file to ccreporting@ed.ac.uk
- 4. Hybrid/homeworking emissions please include an estimate of FTEs working remotely hybrid/home in the designated row provided in table 3b In order for this to be calculated correctly the total no. of FTEs must be entered in Q1c
- 5. Local Authorities completeing the recommended tab should select their local authority region at the top of the sheet and their emissions will be provided automatically from BEIS datasets

3. Colour Coding used in the template

or Report on Compliance with Climate Change Duties 2022 Template Provide a summary of the roles performed by the body's governance bodies and members in relation to climate change. If any of the body's activities in relation to climate change sit outside its own governance arrangements (in relation to, for example, land use, adaptation, transport, business travel, waste, information and communication technology, procurement or behaviour change), identify these activities and the governance arrangements.

whereby bunched is. Abenden 2004 strategy in February 2003. That strategy provides the high-level framework within which all institutional priorities are considered. It has foundably the others are reluctive, interdisciplant, i

It of the associated governance structure, all sustainability related issues are overseen by a Sustainable Development Committee (EXC) which is chaired by the Senior Vice-Principal (SVP). Alongside the SVP, the SDC includes the Principal (SVP) and the senior Vice-Principal (SVP). Alongside the SVP, the SDC includes the Principal (SVP) and the senior Senior (SVP) and the senior Senior (SVP). Alongside the SVP, the SDC includes the SVP and the SVP

tails of the remit and composition of the SDC are available at https://www.abdn.ac.uk/staffnet/governance/sustainable-development-commit

reports via the University's Senior Management Team and from there as required through the University committee structire e.g. to Court.

gement of compliance elements (e.g. waste management and emissions) is overseen by our Directorate of Estates & Facilities.

How is climate change action managed and embedded in the body?

Provide a summary of how decision-making is relation to climate change action by the body is managed and how exponsibility is allocated to the body's senior staff, departmental heads etc. If any such decision-making sits outside the body's own governance arrangements for relation to, for example, land use, subjection, transport, business travel, waste, information and communication technology, procurement or behaviour changes, identify how this is managed and how responsibility is allocated outside the body's senior staff, examples that the senior staff, examples that

ional responsibility for management of our sustainability and net-zero planning lies with our Directorate of Estates & Facilities (e.g., Waste, Transport, Water, Energy, Buildings, Net Zero). From 2021/22 onward we will tion away from a series of rolling five-year Carbon Managent Plans to a longer-term Net-Zero strategy. The newly appointed Net Zero & Emissions Manager will lead the development of this during 2022/2023.

Strategy

2c Does the body have specific climate change mitigation and adaptation objectives in its corporate plan or similar document?

Wording of objective	Name of document	Document Link
Encourage everyone within our community to work and live sustainably, recognising the importance of our time, energy and resilience.	Aberdeen 2040	https://www.abdn.ac.uk/2040/documents/Aberdeer/2040-EN.pdf
Educate all our students and staff to be leaders in protecting the environment.	Aberdeen 2040	https://www.abdn.ac.uk/2040/documents/Aberdeen2040-EN.pdf
Excel in research that addresses the climate emergency, enables energy transition and the preservation of biodiversity.	Aberdeen 2040	https://www.abdn.ac.uk/1040/documents/Aberdeen/040-EN.pdf
Achieve net-zero carbon emissions before 2040.	Aberdeen 2040	https://www.abdn.ac.uk/2040/documents/Aberdeen2040-EN.pdf

Does the body have a climate change plan or strategy?

If yes, provide the name of any such document and details of where a copy of the document may be obtained or accessed.

The University receipt completed is bustles / year Carbon Management Plan (CMP) which covered the period 2016-2021. It was drafted to reflect the format of the Public Bodies Climate Change Duties (PBCCD) reporting and provided a project-focused framework for action in that five-year period. It was formally approved during 2016/17 and remains available online at https://www.abdn.ac.uk/staffnet/documents/policy-zone-sustainability/CMP-2016_2021-final.pdf

Significant progress was made against the targets in that plan. Our overall emissions reduction target (i.e. across a consistent but limited basket of Scope 1, 2 & 3 emissions) fell from the baseline of 31.520 tCD2 e in 2015/16 to 21,332 in 0.0018/19 (the last full year of data point on the pandemic) - exceeding the five year target of 2 00's reduction in year 3 of 8. by 2000/21 emissions are against the same reporting categories (with the indusion of an allowance for home working reduced to 16.99 2010/20 for exceeding the reduced or 16.99 2010/20 (the pastions are proposed to 16.99 2010/20 (the pastions are pastions to 16.99 2010/20 (the pastions are pastions to 16.99 2010/20 (the pastions are pastions) and the pastions are pa

in 2000, as part of the Aberdeen 2040 process, we made a long-term commitment to make the University net-zero before 2040. Initial work has been undertaken during 2011 and 2022 to understand the scope of that challenge, the need for additional resources was identified. A new Net Zero & Emissions Manager was appointed in August 2022 and will lead the development of a more detailed Net Zero Strategy that we aim to make available in the first hard of 2023.

Does the body have any plans or strategies covering the following areas that include climate change?

The What are the body's top 5 priorities for climate change governance, management and strategy for the year ahead?
Provide a brief summary of the body's areas and activities of focus for the year ahead.

The supporting documentation for the sustainability commitments in our Aberdeen 2040 strategy identify the following five headline commitments that cover environmental and financial and fin

urage everyone within our community to work and live sustainably, recognising the importance of our time, energy and resilience at all our students and staff to be leaders in protecting the environment.

In research that address the dimate emergency, enables energy transition and the preservation of biodiversity we net zero carbon emissions before 2040 restrict exercises the contraction and research year on year, so that we can continue to develop the people, ideas and actions that help us to fulfil our purpose restricts reduced for investment in education and research year on year, so that we can continue to develop the people, ideas and actions that help us to fulfil our purpose

g the key sustainability themes that have emerged in subsequent discussion are: academic and operational contributions to the net-zero debate; sustainability literacy; the role of the University in leading the energy transit e and importance of the Sustainable Development Goals in articulating institutional impact; and the impact of business travel and related emissions.

and implementation plans are in place under each of the headline commitments.

2/23 our main focus will be on the following sub-actions:

is with collapses in the Directorate of People to embed sustainability responsibilities into staff Terms & Conditions, induction, core training and other key staffing policies.

Identification of the source of th

Has the body used the Climate Change Assessment Tool (a) or equivalent tool to self-assess its capability / performance? If yes, please provide details of the key findings and resultant action taken.

As the University moves towards a "new normal" for its operations following the challenges of COVID, the Aberdeen 2040 strategy and associated commitments have been pursued with renewed focus. The 2040 strategy places sustainability at the heart of the institutional mission and has been accompanied by the formal embedding of sustainability into our governance structures to support those commitments (see 2a and 2b above) and the establishment of a decined sustainability in in the States It a Entition decined resident and such as a support of the support those commitments (see 2a and 2b above) and the establishment of a decined sustainability in in the States It a Entition decirator to take forwards usone of the detailed commitments.

At the heart of our Abendeen 2040 commitments is a net-erro emissions pledge, with the aim of achieving net-zero before 2040. We continue to work internally and alongside sector and industry partners to assess how best to asade this challenge. 2012/22 has seen us engged in remeded discussions with regional partners about civic district heating environs, including the potential life in linking our institutional network into a city wide network. We have established a Sustainable Heating Programme date of its entire into a city wide entwork. We have established as Sustainable Heating Programme date of the cities (institution and contributions) and an additionally, in 2012/2023, the University recently published its Guiding Principles of Sustainable Business Travel to guide travel practices within the University.

standards Development of a Sustainability team in Estates & Racilles, 2022 has seen the appointment of an academic Dean for Environmental Sustainability team in Estates & Racilles, 2022 has seen the appointment of a Sustainability team in Estates & Racilles, 2022 has seen the appointment of a Sustainability team in Estates & Racilles, 2022 has seen the appointment of a Sustainability team in Estates & Racilles, 2022 has seen the properties of the Sustainability team in Estates & Racilles, 2022 has seen the appointment of the Sustainability team in Estates & Racilles, 2022 has seen the appointment of the Sustainability team in Estates & Racilles, 2022 has seen the appointment of an academic Dean for Environmental Sustainability. The role was established to provide academic leadership for the alternative control of the Sustainability. The role was established to provide academic leadership for the alternative acids and sustainability. The role was established to provide academic leadership for the alternative acids and sustainability. The role was established to provide academic leadership for the alternative acids and sustainability. Details of the Dear's role are available at [www.addn.ac.uk/about/management/dears-110.php]

Integrational terms our primary focus has now shifted to the development of our net zero strategy and the associated projects and actions required to plot a route towards the descarbonisation of our heating networks and the water reduction of emissions successive with all aspects of emerging use. As part of this exercise, we have began the process of associated projects and actions required to plot a route towards the descarbonisation of our heating networks and the water reduction of emissions successived with all aspects of emerging use. As part of this exercise, we have began the process of associated projects and actions required to plot a count of the proposed period projects in the project of the projects and actions required to plot and action to provide the project of the project of the project of the project of travel (business stored, community, and student twee to study in Aberdeen) with the aim of establishing emchanologies for strateging there. We are also undergo storage forming our understanding of programment emissions. In all cases these developments will expand the range of categories of emissions we are able to report against in the PRCCD exercise, moving towards a comprehensive portfolio of Scope 3 emissions, alongside the historically move robust data the sector has had on energy, water, and water.

ART 3 Corporate Emissions, Targets and Project Data

Emissions

1a Emission from the start of the year which the body uses as a baseline (for its carbon footprint) to the end of the report year

Complete the following table using the greenhouse gas an emissions total for the body calculated on the same basis as for its annual carbon footprint / management reporting or, where applicable, its sustainability reporting, include greenhouse gas emissions from the body's estate and operations (a) (measured and reported in accordance with Scopes 1.8.2 and, to the extent applicable, selected Scope 3 of the Greenhouse Gas Protocol (b). If data is not available for any year from the start of the baseline year to the end of the report year, provide an explanation in the comments culum.

(a) No information is required on the effect of the body on emissions which are not from its estate and operations.

(b) This refers to "The greenhouse gas protocol. A corporate accounting and reporting standard (revised edition)", World Business Council for Sustainable Development, Geneva, Switzerland / World Resources Institute, Washington DC, USA (2004), ISBN: 1-56973-568-9.

ENSURE QUESTION 1f IS COMPLETED BEFORE STARTING THIS SECTION. THEN SELECT APPR	COPRIATE RASELINE YEAR							
Reference year	Year	Year type	Scope 1	Scope 2	Scope 3	Total	Units	Comments
Baseline Year	2015/16	Academic	13,095	12,468	5,958	31,520	tCO ₂ e

	Targets											
3d	Organisational targets List all of the body's targets of relevance to its climate change duties. Where applicable, targets for reducing indirect emissions of greenhouse gases, overall carbon targets and any separate land use, energy efficiency, waste, water, information and communication technology, transport, travel and heat targets should be included. Where applicable, you should also provide the body's target date for achieving zero direct emissions of greenhouse gases, or such other targets that demonstrate how the body's contributing to Scotland achieving its emissions reduction targets.											
	Name of target	Type of target	Target	Units	Boundary/scope of target	Year used as baseline	Baseline figure	Units of baseline	Target completion year	Progress against target	Comments	
	2040 Net Zero Emissions Target - Overarching	Percentage	100	total % reduction	All emissions	2015/16	84,909	tCO2e	2039/40	On Target	The baseline figure currently does not include Scope 3 emissions from student commuting. It does include emissions resulting from procurement activities that have been calculated using the NESCET tool. This emission source was not a reporting requirement as part of PROCCO for the 2015/2016 baseline.	
											A Sustainable Business Travel policy is currently under review and approval within the University which will encourage a reduction in business travel emissions through a combination of alternative modes of travel and/or a reduction in travel.	
	Business Travel reduction of 40% on 2018/19 figures by 2025	Percentage	40	total % reduction	Transport	2018/19	4,166	tCO2e	2025/26	On Target	The impact of COVID-19 on business travel has favourably benefited the University's progress to this target for 21/22.	
											As the shift back to in person teaching and on site working increases following the COVID-19 pandemic, the water consumption across the thinversity has increased accordingly, it should also be noted that a significant teak in the University's Kings College Heat Network resulted in a increase in water demand towards the end of the academic year.	
	Reduce water consumption 2% year-on-year	annual	2	annual % reduction	Water and sewerage	2015/16	150,462	мз	Please select from drop down box	Not achieved.	Ongoing issues with water metering (current and historic) make it difficult to assess the validity of our water data. We will continue to review and target this as part of our shift to an net-zero approach.	

financial allocation in the capital plan for the forthcoming ten-year period. That has allocated £250,000 in 2022/23 to 2024/25, with £500,000 per annum thereafter. In 2022/23 a supplementary sum of £700,000 has also been allocated. tly reviewing the costs of undertaking the key Net Zero projects and seeking to secure long term funding, resources, and potential partnerships that will allow the delivery of said projects.

ering/Offsetting will also form a key part of our Net Zero strategy for the "unavoidable" emissions towards 2040. The University plans to review the anticipated annual cost of this practice to allow capital to be allocated in a suitable, sustainable is

3. Supporting information and best practice
Provide any other relevant supporting information and any examples of best practice by the body in relation to corporate emissions, targets and projects.

Grey Water
The University has grey water harvesting systems installed on 3 sites. These systems supplied a total of 3,639m3 of grey water to these sites.

Methodology Update - Emissions from WNS Supplied Electricity

A review and update has been undertaken to the methodology for calculating carbon emissions from the consumption of NHS supplied electricity. The NHS provides electricity to a number of our Foresterhill sites through a combination of a supply from its CIP system and from the grid. The proportion of generation sources is not steedy and changes boruly.

The proportion of generation sources is not steedy and changes boruly.

The proportion of generation sources is not steedy and changes boruly.

The proportion of generation sources is not steedy and changes boruly.

The proportion of generation sources is not steedy and changes boruly.

The proportion of generation sources is not steedy and changes boruly and such such standards in the supplied electricity factor as there was no government factor for non-grid purchased electricity. This resulted in an "over report" of emissions. The supplied electricity generation is proportion of grid so CIP electricity is calculated and applied to the University of consumption to achieve the actual amount of grid electricity consumed.

This updated method allows the University to report NHS grid emissions that fully reflect how the sites and systems operate.

Staffing Updates
The University has recently created and filled the post of Net Zero and Emissions Manager - this role focuses on developing the roadmap to achieving Net Zero before 2040.

Reporting Boundary Update
As part of the 2040 roadmap, the University has recently reviewed the reported emissions boundary which will now include Procurement (Scope 3), Staff Commuting (Scope 3) and Student Commuting (Scope 3).

Scope 3 - Procurement Data & Emissions
For the first time, the University is including Scope 3 Procurement Emissions from the APUC HESCET tool. It should be noted that the current HESCET analysis tool utilises a spend-based methodology which, while recognised as not being best practice, is the current calculation standard across the Exector.

Scope 3 - Staff & Student Commuting Data & Emissions
The staff and student commuting Data & Emissions
The staff and student commuting data gathering methodologies are currently under review (in addition to Business Travel) to improve the confidence in said data.

longer term goal, the University is working towards improving its data quality across all emission sources to allow accurate tracking against Science Based Targets.

ect	or Report on Compliance with Climate Change Duties 2022 Template
	Adaptation According and managing risk
	Assessing and managing risk Has the body assessed current and future climate-related risks?
	If yes, provide a reference or link to any such risk assessment(s). During 2020/21 we revised the sustainability content of our Estates Design Guide to reinforce the need for detailed sustainability considerations on all capital projects (new build or refurbishment) including
	the climate resilience of those buildings.
	In previous years we have made efforts to assess our climate risks, but have yet to formally embed this in Business Continuity practices. However, following a discussion at our Estates Committee in October 2000 leaves deveral incidences of campus flooding) this issue has been identified as an area of concern. Currently a business continuity linked risk captures the potential impact of Climate Change on the University.
	NOTE: Previous activity had seen an MSc student on the University's Environmental Partnership Management (EPM) programme work with the Estates section (summer 2017) to successfully complete a Partnership Hesis that established an initial approach to adaptation. A series of workshops were held with colleagues in Estates during which key climate change wither abilities across our campuses in and sound Aborderen were discussed, mapped and asseed. This process used as its starting out the guidance for Palish Bodies in Sciotal and aimed to provide key recommendations and an initial around Aborderen were discussed, mapped and asseed. This process used as its starting out the guidance for Palish Bodies in Sciotal and aimed to provide key recommendations and an initial
	around Aberdeen were discussed, mapped and assessed. This process used as its starting point the guidance for Public Bodies in Scotland and aimed to provide key recommendations and an initial adaptation risk register around which the University could build its subsequent approach to adaptation. Its key focus was:
	 To examine climate change adaptation in the context of Scottish Public Bodies and the University of Aberdeen in particular. To seek to understand the potential consequences of future climate impacts specific to the University of Aberdeen.
	 To identify and prioritise ways to manage climate risks. To provide recommendations for the implementation of practical climate adaptation measures.
	The workshops identified 31 climate issues spread across six campus locations and further sub-divided between four categories of "issue" (buildings, people, grounds/green spaces, infrastructure).
	Additionally 20 potential future impacts were identified and summarised in a risk register.
	What arrangements does the body have in place to manage climate-related risks?
	Provide details of any climate change adaptation strategies, action plans and risk management procedures, and any climate change adaptation policies which apply across the body.
	Our Sustainable Development Committee (SDC) chaired by the Senior Vice-Principal, has been established explicitly to raise the profile of sustainability issues across the institution. As part of a review of the institutional approach to risk in autumn 2021, an Environmental Sustainability category has been added to our main institutional Strategic Risk Register (SRR), with the content of that section reviewed and
	maintained by the SDC.
	Our response at 4a outlines the preferred model for embedding climate adaptation thinking, notably the intent to embed adaptation as part of the wider institutional discussion of resilience led by the University's Business Continuity committee and informed by the new SOC. Our intention therefore, remains to work to embed adaptation as part of the wider institutional resilience framework, including as part of the project risk management process on every refurb/new build.
	part of the project rok management process on every refurb/new build. We welcome the work that has been done by the EAUC and HEBCON in producing best practice guidance for the sector.
	and the state of t
	Taking action
	What action has the body taken to adapt to climate change? Include details of work to increase awareness of the need to adapt to climate change and build the capacity of staff and stakeholders to assess risk and implement action. The body may wish to make
	include details of work to increase awareness of the need to adapt to climate change and dust the capacity or start and stakenoides to assess risk and implement action. The door may win no make reference to the Schrifts Climate Change Adaptation Programme ("In Programme"). Having engaged colleagues from across States & Facilities in workshops as part of our initial mapping of adaptation risks, it became clear that a number of important maintenance projects had taken
	Having engaged colleagues from across states & a solitimes in workshops as part of our initial mapping of adaptation raiss, it became clear that a number of important mantenance projects had taken foroward "adaptation measures" without, at the time, using that terminology (e.g. a number of roofing upgrade projects had seen guttering and pipework improved to increase the capacity of our buildings to cope with more incidences of extreme wealther).
	tope was more incurrence to extreme weather). The University has recently undertaken an extensive condition surverys exercise across all of its sites. This aims to understand the scope of the activities required to future proof buildings and infrastructure.
	These surveys will inform future maintance and capital projects which will be further enhanced and informed by the revisions to the sustainability content of the Estates Design Guide and by the emerging register of net-zero projects we are identifying.
	Additionally, the University is also reviewing the resilience of its energy generation technologies and heat networks to ensure the infrastructure is capable of operating in extended period of extreme
	weather (i.e. heatwaves, heavy rainfull and prolonged cold periods). We are also engaging with industry and civic stakeholders about the potential of linking energy infrastructures and shared opportunities as we move away from fossil fuel based technologies.
	With the expansion of the Sustainability Team within Estates & Facilities, the subject of green infrastructure is being brought to the attention of project and operational discussions, with some fresh capacity to be about a considered as hisrofluench and discussions with some fresh capacity.
	to be able to consider e.g. biodiversity and climate resilient planting. Where applicable, what contribution has the body made to helping deliver the Programme?
	Provide any other relevant supporting information Outcome 4 Contribution: The University is currently part of a stakeholder group, led by Aberdeen City Council, discussing proposals to develop a city-wide heat network. Should this discussion see a civic
	network established that the University is a formal part of, it has the potential to increase the resilience of the University's own heat network, as well as contributing to a wider civic agenda that incudes reducing fuel poverty and providing heat to community housing.
	Review, monitoring and evaluation What arrangements does the body have in place to review current and future climate risks?
	Provide details of arrangements to review current and future climate risks, for example, what timescales are in place to review the climate change risk assessments referred to in Question 4(a) and adaptation strategies, action plans, procedures and policies in Question 4(b).
	At this stage we have no formal arrangement or timetable but our Estates Committee has flagged the importance of this issue and the link to Business Continuity planning. Our intention remains to embed adaptation among the other key 'resilience' issues considered by these groups and, through initiatives like the revised Estates Design Guide, to formalise the expectation of Design Teams.
	See also 4g - among the key recommendations of the work to date is the need to expand awareness of adaptation beyond Estates & Facilities and, in due course to consider the wider 'adaptation' impacts
	that may apply to activities undertaken away from our campus e.g. at overseas campuses or with partners internationally. In the first instance the main focus is, however, likely to remain on buildings and infrastructure issues.
	What arrangements does the body have in place to monitor and evaluate the impact of the adaptation actions?
	Please provide details of monitoring and evaluation criteria and adaptation indicators used to assess the effectiveness of actions detailed under Question 4(c) and Question 4(d).
	Please sée 4e
	Future priorities for adaptation
	What are the body's top 5 climate change adaptation priorities for the year shead? Provide a summary of the areas and activities of focus for the year shead.
	Provide a summary of the areas and activities of focus for the year ahead. Our adaptation priorities remain:
	Continue to work in partnership e.g. with the EAUC, Adaptation Scotland and in regional bodies such as Aberdeen Adapts.
	 Raise awareness of adaptation to identify knowledge gaps and misconceptions (in particular among staff involved in estates and grounds). Further identify adaptation risks by broadening the range of staff involved in e.g. adaptation workshops. A freed adaptation as part of the institution's business continuity and resilience thinkine.
	5. Promote environmental sustainability more generally as part of the Aberdeen 2040 strategy.
	Further information
	Supporting information and best practice Provide any other relevant supporting information and any examples of best practice by the body in relation to adaption.
	Students from the MSc Environmental Partnership Management have been involved in helping establish a number of local adaptation initiatives e.g. in 2016 a student also helped to establish the Aberdeen
	Adapts programme (with Aberdeen City Council) and in 2017 we were delighted to welcome a student to adopt a Tiving laboratory' approach to the University's initial foray into climate change adaptation thinking (see detail at 4a above).

Public

Sector Report on Compliance with Climate Change Duties 2022 Template

How have procurement policies contributed to compliance with climate change duties?

Provide information exhibition to the procurement policies of the body have contributed to its compliance with climate changes duties.

The University of Aberdeen has developed a Procurement Strategy and Action Plan in line with the Procurement Reform (Scotland) Act 2014. This can be found on our website at https://www.abd.ac.ac.id/procurement and is aligned with the Aberdeen 2040 Strategic Plan and the University's strategic goals to assist our vision of procuring in an environmental, social, ethical and economical responsible manner.

The University's Procurement Policies require that a Procurement Project Strategy is developed for all procurements with a total value of £50,000 and over ex: VAT. The Procurement Project Strategy requires the procurement lead to utilize the approach to complying with the sustainable duty detailed in the Procurement Reform (Scotland) Act 2014. It covers topics such as: carbon emissions relevant to the procurement, community hereits, fair, work practices, methods of innoving a payment etc. This ensures out rety objectives is to be made sound ethical, social and environmental policies within the University's function and compliance with relevant legislation in the performance of the sustainable procurement duty are achieved.

University's function and compliance with reevant legislation in the performance of the sustainable procurement dusy are achieved.

For all Regulated Procurements (i.e. value of ESOS and over), a Supply Chain Code of Conduct. (based on that championed by Advanced Procurement for Universities and Colleges (APUC)) is issued to potential supplies at tendering stage. Supplies are asked to make a clear declaration of support for the principles contained within this Code. This code covers not using forced, involuntary or underage ablour, proving subable working conditions and terms, resting employees fairly, commitment to ethical compliance and exonantic development of supplies. In relation to environmental supplies commits, or a minimum.

Complying with all local and national committed and expension and directions of the countries they are destroking in manufacturing in trading with a supplicable more provided in the countries of the are developed in the countries of the present size, in a supplicable more provided in the countries of the present size, in the countries of the present size and supply of the goods or services and disposal of supply chain waster.

The present size of the pre

ocurement team ensure that they keep up to date with developments in relation to sustainable procurement and related climate emergency actions being rolled out across the sector. The tean aken training on evaluation criteria which includes the use of assessing whole life costs and sustainable outcomes.

How has procurement activity contributed to compliance with climate change duties?

Provide information relating to how procurement activity by the body has contributed to as compliance with climate changes duties.

The University of Affectives acknowledges its procurement activity by the body has contributed to as compliance with climate changes duties.

The University of Affectives acknowledges its procurement activity by the body has contributed to as compliance with climate changes duties.

The University of Affectives acknowledges its procurement activity by the activities of the environment, society and the economy. Procurement not only delivers value for money but sets the

Procurement Policy & Procedures advises consideration of whole life costs (this includes determining the need for the goods/services, through to its eventual disposal and replacement), environment social impacts in assessment of value for money. We follow the Scottish Government Procurement Journey and the Sustainable Procurement Duty outlined in the Procurement Bering (Scottiang) Act which requires that in scitations must think about how they can import the social environmental and exconnic we elbed right environmentaged procurement securities of the scottians and the scottian of the scottians are scottians of the scottians of the scottians are scottians and the scottians are scottians and the scottians are scottians are scottians as the scottians are scottians are scottians as the scottians are scottians are scottians.

In conjunction with APUC, the University has begun work with EcoVadis (the largest provider of business sustainability ratings), to commence a review of our supply chain. This requirement shall form part of our processes going forward. Over the coming financial year, the Procurement Team will analyse the organisation's operations and its supply chain to prioritise high risk categories and suppliers across rating environment, lacking environment, lacking and evaluation and the University suppliers and their supply chains through the use of a comprehensive, results-oriented methodology will help the University to identify risks and to ratio ewareness of the range of issues that arise when buying goods and services.

Further information

Supporting information and best practice
Provide any other relevant supporting information and any examples of best practice by the body in relation to procurement.

urrement is working with the Responsible Procurement Team at APUC in relation to Scottish Public Body - PRIT (From Now To) (2010). We have attended kick-off Workshops to develop action plans and eview our internal polices relevant to specific commodity categories. Looking at initiatives or behaviours applied to reduce Grid emissions within the commodities, as well as review the Sector's Supply Chitante & Ecological Intergency, Particle (SCEST). The Workshops cover commodities and as 1 CF, Furniture, Food & Froset.

The Head of Procurement participates in the Scottish Government Procurement & Climate Change Forum – Monitoring and Reporting Work Stream. The purpose of the group is to address the impact of global climate emergency on procurement, priorition resources to identify and address monitoring and reporting (Scopes 1.2 & 3) through public procurement and streamlines Procurement & Climate Chara Reporting. This work would not only benefit the University of Anthere hou could have a multi-sector approach to capturing and reporting emissions from procurement.

9	
6 Validation and Declaration	
Internal validation process	
Briefly describe the body's internal validation process, if any, of the data or information contained within this report.	
The co-ordination of these submissions is undertaken by our Estates & Facilities Directorate.	
Data was provided by the functional leads in the relevant areas, notably Energy, Waste, Transport & Procurement.	
The information was reviewed by the Sustainable Development Committee on 15 November 2022 and endorsed for onward consideration by the University's Senior Management Team (SMT). SMT in turn provided, by circulation, formal approval for submission in line with the reporting deadline.	
Peer validation process	
Briefly describe the body's peer validation process, if any, of the data or information contained within this report.	
The University took part in the EAUC facilitated group PBCCD Peer Review Process on 15 November 2022. This was a useful exercise and reinforced our decision and approach to the inclusion of Procurement emissions for the first time this year.	
External validation process	
Briefly describe the body's external validation process, if any, of the data or information contained within this report.	
Elements of the data submitted as part of this exercise are also submitted as part of our annual Higher Education Statistics Agency (HESA) return. The timing of the PBCCD return is out of synch with some of	
our key reporting exercises, notably the HESA process (which is the sector's key data submission and validation exercise and adheres to a spring reporting schedule) and the finalisation of our Annual Report	
and Accounts which culminates in approval at a Court meeting in December.	
Given these reporting schedules, some of the contextual responses here relate to 2020/2021 and not to 2021/2022. Updates can be made available early in 2023 if required.	
No Validation Process	
If any information provided in this report has not been validated, identify the information in question and explain why it has not been validated.	
We are committed to the provision of timely and accurate data as part of this exercise and we continue to review our submission, including those areas where there are gaps (i.e. procurement and supply chain emissions, or staff/student commuting) or where we acknowledge that our capacity is limited (i.e. adaptation).	
We continue to assess how best to validate future submissions, with a particular focus on how that can be achieved given the restricted submission timescale for those of us reporting on the basis of an	
we commot us assess how east or anianate notine associations, which a particular to a substitution of	
to allow the timely inclusion of all relevant data as part of future submissions.	
Declaration	
I confirm that the information in this report is accurate and provides a fair representation of the body's performance in relation to climate change.
