

17th Seismix Symposium

Aviemore, Scotland

May 15 - 20, 2016

In the heart of the Scottish Highlands

Seismix is an international symposium that focuses on seismic imaging of continents and their margins. It has been held every two years since 1984, and is unique in the way that it brings together seismologists who exploit passive and active source data, and work on applications that range from exploration through to continental-scale tectonics. The theme of Seismix 2016 is "seismology at the cross-roads", because it emphasises the overlap between the diverse range of disciplines that are represented.

In 2016, Seismix will be held at the Macdonald Aviemore Resort near the centre of the picturesque town of Aviemore, which is located in the heart of the Cairngorms National Park within the Scottish Highlands. Although the focus of the symposium will be an exciting scientific program that features many leading international researchers, the Organising Committee is also delighted to be able to take full advantage of Scotland's famous scenery, geology and food. This will be in the form of a mid-week fieldtrip to Loch Ness and Urquhart Castle, an optional post-conference field trip to NW Scotland, and a conference dinner at the highest restaurant in the UK.
