

## **New Online MSc in Global eHealth**

**Applications open now to start in September 2014 , January or April 2015**

From September 2014, the University of Edinburgh are delighted to now offer a new online Masters in Global eHealth. As part of the University of Edinburgh's Global Academy portfolio, this programme pays special attention to issues of innovation and technology transfer in lower versus higher income country settings, the implications of globalisation and the opportunities for technology to facilitate global equity.

This international and interdisciplinary programme introduces eHealth in the context of international health systems and global health challenges, supported by specialist courses covering areas such as public health informatics, tele-medicine and mHealth. It offers a unique opportunity to develop a comprehensive critical understanding of the many technical and sociotechnical factors underpinning eHealth and the research skills needed to study, implement and evaluate eHealth innovations.

This blend of classic health informatics, innovation studies and cross-cultural policy studies will support and advance those with careers or career aspirations in international health and development, health care management, clinical practice, digital business, and applied research. The Programme Team is led by Dr Claudia Pagliari and co-directed by Dr Liz Grant and supported by co-ordinator Caroline Smith and administrator Gayle Fitzpatrick.

**Closing date for September applications (including all supporting documentation): Monday 8 September 2014.**
