Once you’ve mastered the basics of Write-N-Cite, you might want to use some of the advanced features available such as editing citations and temporarily modifying the format of a bibliography.

1. Edit citations

You can edit citations or footnotes to:
- hide the publication year in the citation
- hide the entire citation and only have the bibliography entry
- hide the author name in the citation
- hide page numbers (suppress pages)
- add text before the citation (prefix)
- add page numbers (override pages)
- add text after the citation (suffix)
- change the citation ordering

Note: Some editing options are dependent on your Output Style. For example, adding or hiding page numbers works ONLY if your Output Style includes page numbers in the in-text citation or footnote, otherwise the options will be unavailable (see screenshot below)

2. Change the ordering of references in a citation

Click on a reference and use the up or down arrow buttons. This only applies to Output Styles that use first-cited order. For styles that use alphabetical or other sorting, click the Override Default Ordering check box.
3. Edit a citation already inserted into your document

Video provides a powerful way to help you prove your point. When you click Online Video, you can paste in the embed code for the video you want to add. You can also type a keyword to search online for the video that best fits your document (Kölling, Duffield et al. 2019). To make your document look professionally produced, Word provides header, footer, cover page, and text box designs that complement each other.

For example, you can add a matching cover page, header, and sidebar. Click Insert and then choose the elements you want from the different galleries (Cece, Guillem-Descas et al. 2019). Themes and styles also help keep your document coordinated. When you click Design and choose a new Theme, the pictures, charts, and SmartArt graphics change to match your new theme.

When you apply styles, your headings change to match the new theme. Save time by using buttons that show up where you need them. To change the way a picture fits in your document, click it and a button for layout options appears next to it. When you want to add a row or a column, and then click the plus sign.

Double-click on the citation in Word or right-mouse click on the selected citation and select the item from the context menu. The Insert/Edit Citation box will appear and you can make your modifications.

4. Switch between notes and in-text styles

Write-N-Cite keeps track of your notes and in-text citations when changing styles. If you change from a notes style, like Chicago, to an in-text only style like APA, your footnotes will be pulled up into the document, formatted as in-text citations and merged with any adjacent citations. The opposite also works when switching from an in-text style to a notes style.

For styles that accept either notes or in-text citations, Write-N-Cite will keep track of the original location of a citation and return it to the appropriate place as your Output Style changes.

5. Custom Bibliography formatting

Write-N-Cite lets you modify or override the bibliography formatting of the output style you have chosen. Modifications do not permanently alter the output style, only applying to the specific paper you have formatted.

Modifications include:
- Overall bibliography sort order
- How the bibliography is numbered or ordered
- Line spacing and indentation
- Margins
Note: You must select the Output Style and insert the bibliography into your paper before you can modify the formatting. You will be prompted to make sure that you want to override the expectations of your Output Style.

To modify bibliography formatting
1. In Write-N-Cite open the Bibliography Options menu and select Format Bibliography.
2. Click on the Click here to unlock style link at the bottom of the formatting box.
3. Make any changes to the sort, ordering, margins and spacing.
4. Click OK when finished.

Tip: If you leave the Format Bibliography window with the lock icon unlocked, your customisations will change when you change Output Styles. Re-lock this form to maintain your customisations as you change styles.
### 6. Sync My Database

Each time you launch Write-N-Cite, it will download any new or edited references and output styles. Should you add data to your RefWorks account while you are working on a paper, your changes will become available as you work. If you feel that your changes haven’t yet arrived, you may wish to request that Write-N-Cite syncs with your RefWorks database.

**To sync your database:**
1. Open Word and click the RefWorks tab from the Word ribbon.
2. Click **Sync My Database**.

![Sync My Database](image)

### 7. Remove field codes for publishing

Write-N-Cite stores codes within your MS Word Documents to represent your references and bibliography. Some publishers prefer a version of your document without the coding. In the RefWorks tab use the **Remove Field Codes** option to remove all hidden coding inserted by Write-N-Cite.

**Before you start this process, we strongly recommend you save a copy of your document with a different name,** as this option removes all field codes from your document and documents without field codes cannot be updated or reformatted with RefWorks.

![Remove Field Codes](image)

### 8. Reapply Output Style

This option re-runs formatting for citations, notes and bibliographies as defined by the Output Style and any customisations you have made. Useful when working with Master and Sub documents that have different styles.

9. Write-N-Cite Preferences

There are various ways to alter your preferences for how Write-N-Cite operates.

Log In/Log Out

Should you choose to log out of W-N-C (which is not necessary on your own personal computer), click the Log Out button. The next time you launch W-N-C, you will need to log in.

Switch Accounts (Preferences tab)

If you are accessing W-N-C from a library or public computer, click the Switch Accounts button to log in to your own personal RefWorks account.

Import Microsoft Office References

If you have used the MS Office feature that allows you to enter and store references in Word, you can import those into your RefWorks account (and W-N-C).

Maintain Autosync Folders
This option, enabled by default, will create a sub-folder named after your document in your RefWorks account and place copies of the references you used in that folder for easy access (your references remain in any other folders they were stored in). These new folders will appear under the top-level Documents folder.

In this example the document is saved with the name “Neuronal Dynamics”. You can disable the folder auto-sync from Preferences or directly from the Settings area.

Convert from Previous Versions of Write-N-Cite
Write-N-Cite will automatically convert documents created with Write-N-Cite III. For unformatted documents created in Write-N-Cite 2, you can manually convert them.
1. Open your document and click on the RefWorks tab in the Word ribbon.
2. Click on the Preferences area.
3. Click Convert.
4. Save your converted document. Conversions cannot be undone once you’ve saved your document.

Language Preferences
Allows you to change the display language for W-N-C to any of the current language offerings.
