

OFFSETTING AND CARBON CREDIT POLICY

1.0 Introduction

- 1.1 The University of Aberdeen's Net Zero Strategy sets out a series of targets and pathways associated with the commitment to achieving net zero before 2040 articulated as part of Aberdeen 2040.
- 1.2 While there are established routes to decarbonising Scope 1 and 2 emissions, there are likely to be residual Scope 1 & 2 emissions that require offsetting. There are also likely to be some categories of indirect emissions that we track under Scope 3 that will require to be offset e.g., as part of the conditions of grant funding. As such, we anticipate using various forms of offsetting, insetting, or other forms of sequestration to address these emissions.

Carbon Sequestering Carbon Offsetting Also known as the use of carbon credits, carbon Carbon sequestration is where an organisation captures, removes and stores carbon dioxide from the earth's offsetting is the practice of purchasing emission atmosphere. This can happen in two basic forms: reduction credits from an external company that relate biological or geological. to one or more carbon sequestration schemes. Biological sequestration: happens when carbon is Such schemes could include tree planting, renewable stored in the natural environment. This includes what are energy projects, or carbon capture. known as 'carbon sinks', such as forests, grasslands, soil, oceans and other bodies of water. This is also known These transferable credits are certified by governments as an 'indirect' or passive form of sequestration. or independent certification bodies to represent an emission reduction of one metric tonne of CO2 (or an Geological sequestration: happens when carbon is equivalent amount of other GHGs). stored in places such as underground geological formations or rocks. This process is largely artificial or The purchaser of an offset credit can "retire" that credit 'direct', representing an effective way of neutralising to claim the allotted emissions reduction towards their emissions arising from human practices, such as GHG reduction goals. manufacturing or construction.

- 1.3 It is acknowledged that the practice of offsetting to negate the emissions associated with certain operational activities is likely to form some part of the University's net zero journey. As part of the development of our Net Zero Strategy, the need for a definitive institutional position on emissions offsetting emerged as an area for further development.
- 1.4 The University's current focus is the decarbonisation of its estate and operations, in alignment with expectations and guidance from Scottish Government.
- 1.5 This document serves as an interim policy position on offsetting until a more comprehensive institutional approach is required. This timeline will reflect any guidance and expectations from the Scottish Government.
- 1.6 In the meantime, this policy aims to:
 - Identify the categories of emissions we wish to offset in the short-term.
 - Ensure the credibility of any offsetting schemes we use.
 - Establish an agreed institutional process for tracking and managing offsets.

2.0 Guidance

- 2.1 It is important to note at the outset that we do not encourage the independent offsetting of emissions via schemes that are not endorsed under this policy. Any offsetting that is approved will be centrally managed and will take place through institutionally endorsed schemes that meet enhanced quality standards.
- 2.2 For example, ad hoc schemes, such as those offered by airlines at the checkout stage of online booking, will not be supported by University procurement processes and should not be used in any circumstances. Costs incurred in purchasing such offsets will not be reimbursed as these offsets cannot be counted towards reducing institutional emissions.
- 2.3 We recognise, however, that in certain circumstances it will be deemed appropriate and necessary to offset emissions e.g. as part of the formal conditions of some types of research grant funding. Most notably this is now a standard of condition of grant for Wellcome Trust funded research.
- 2.4 Where such offsetting is required, the University will engage the Carbon Coalition (i.e. the Higher Education sector's bespoke offsetting broker). This will ensure that any credits purchased comply with funder requirements, are of a high-quality, and ensuring consistency and transparency in how credits are managed and verified.
- 2.5 The projects available through the Carbon Coalition also have the following focuses to ensure strong links with the values and ambitions of the Higher Education Sector:
 - Educational projects
 - Projects with teaching opportunities
 - Projects with research opportunities
 - Projects mapped to the UN's Sustainable Development Goals
- 2.6 This offsetting will be co-ordinated centrally to allow accurate records to be maintained and to support our statutory emissions reporting processes. This process will be overseen by colleagues in Estates & Facilities and Research & Innovation. **Individuals are not permitted to undertake this offsetting independently**.

3.0 Procedure

- 3.1 To ensure that all credits purchased align with our Offsetting Policy, and to enable accurate regulatory and external reporting, anyone required to purchase carbon credits to offset the impact of their research must adhere to the University's offsetting procedure.
- 3.2 As part of the development of an offsetting component of any research grant application, e.g. for the Wellcome Trust, staff are expected to liaise with the Research Finance team as part of the development of their grant application.
- 3.3 The Research Finance team, supported by Sustainability staff in Estates & Facilities, will provide detailed guidance on what information is required at the grant proposal stage. Applicants will be given access to guidance materials and emissions calculation tools to develop a breakdown of the anticipated travel and related emissions. This will enable the development of an estimated offsetting budget associated with the research grant. This will be reviewed and verified by the Sustainability team.

- 3.4 If the research grant application is successful, R&I will purchase carbon credits in advance to cover the total emissions estimated as part of the application process. These credits will be added to a ringfenced Offsetting Credit Bank. This advance purchase will help to mitigate against potential future carbon credit price rises during a project's lifetime.
- 3.5 Grant holders will be asked to submit a quarterly breakdown of travel undertaken over the previous 3-month period to establish the emissions associated with the project to date. Credits equal to that volume of emissions and the associated cost will be allocated to the project from the ringfenced Offsetting Credit Bank.
- 3.6 The pre-purchased credits will be formally retired at the time of purchase by the carbon broker on behalf of the Sustainability team. This retiral will formally offset the travel as required by the research funder. Evidence of this will be provided to the grant holder for their records.
- 3.7 If additional travel occurs that was not originally budgeted for, credits will be purchased on behalf of the project from the University's carbon broker at current prices. The processing of these credits will follow the normal procedure for procuring, allocating, retiring and tracking the credits.
- 3.8 A full summary of this procedure can be found in **Appendix A**.

4.0 Further Information

- 4.1 If you require further information or guidance on the policy, please contact colleagues in either of the following areas:
 - Estates & Facilities (Sustainability): sustainability@abdn.ac.uk
 - Research and Innovation (Research Finance): <u>ResearchFinance@abdn.ac.uk</u>

University of Aberdeen Research Grant Offsetting Procedure

To ensure any and all credits purchased align with our Offsetting Policy, and to enable accurate regulatory and external reporting, anyone wishing to purchase carbon credits to offset the impact of their work must adhere to the following procedure:

Pre-Award Post-Award

Stage 1

Activities:

- Applicants will be invited to attend an introductory call where the process will be explained and needs confirmed.
- Applicants will be issued with information materials on offsetting and the University's procedure for purchasing.
- Applicants will be provided with travel emissions calculator for completion and quidance documentation.

Point of Contact:

R&I - Research Finance Team

Outcomes:

- Completed breakdown of expected travel activities and associated emissions.
- · Estimated offsetting budget.

Stage 2

Activities:

Verification of estimated travel related emissions.

Point of Contact:

E&F - Sustainability Team

Outcomes:

 Verified breakdown of travel related emissions.

Date: 31/03/2025

Verified offsetting budget.

Stage 3

Activities:

- The total quantity of credits estimated (plus 10% for contingency) for the project will be purchased from the University's carbon broker and added to the ringfenced Offsetting Credit Bank.
- Projects and applicants added to offsetting register.
- Issuing of post-award travel and emissions tracker.
- Reminder of procedure and requirements.

Point of Contact:

R&I - Research Finance Team

 $-\cdot -\cdot -\cdot -\cdot -$

Outcomes:

 Purchase of carbon credits for project.

Stage 4

Activities:

- Four times a year, grant holders will be requested to submit a breakdown of travel undertaken over the 3-month period and the associated emissions.
- Credits equalling the total emissions will be "purchased" from the ringfenced Offsetting Credit Bank.
- The "purchased" credits will be formally retired to offset the travel as required by the Research Grant funder.

Point of Contact:

R&I - Research Finance Team

Outcomes:

- Confirmation of retired credits to cover travel.
- Transfer of the cost of the offsets to the project.

Stage 5 (Optional)

Activities:

- If additional travel occurs that was not originally budgeted for, credits will be purchased on behalf of the project from the University's carbon broker at current prices.
- Project will "purchase" credits from Offsetting Credit Bank
- The "purchased" credits will be formally retired to offset the travel as required by the Research Grant funder.

Point of Contact:

R&I - Research Finance Team

Outcomes:

Purchase of additional carbon credits for project.
