Co-hosted by: University of Aberdeen Rowett Institute of Nutrition and Health

“Industry & academic partnerships for developing health-improving products”

Marks and Spencers plc have a long commitment to innovation in the development of their food product ranges and are often first to market with a new food concept. They recently launched the ‘Simply Fuller Longer’ range based on scientific research undertaken at the Rowett Institute which showed that protein is a satiating nutrient, and so promotes adherence to a calorie-controlled weight loss regime.

The symposium will explore innovation in the food industry through collaboration with Universities from both a UK and European perspective.

Confirmed speakers:

Claire Hughes,
Company Nutritionist at Marks and Spencers plc:
Academic and industry collaboration for innovation: opportunities and case studies

Dr Alexandra Johnstone,
Senior research scientist, Rowett Institute of Nutrition and Health:
Development of Simply Fuller Longer range for appetite control

Dr Jason Holford,
University of Liverpool:
Satiety enhancing products and health claims

Other speakers to be confirmed.
