University of Aberdeen Superannuation & Life Assurance Scheme

AGM 5th June 2018
Member presentation – the actuarial valuation

Jonathan Seed, Scheme Actuary
Agenda

1. The actuarial valuation – what is it?

2. What are the liabilities of the Scheme?

3. What are the assets of the Scheme?

4. Valuation results and current Scheme funding position

5. What else is happening?
The actuarial valuation

- Must be carried out every three years by the Scheme Actuary for the Trustees
- Compares the market value of assets with the assessed value of the liabilities
- The triennial valuation is important because it determines how much will be paid into the Scheme
- The approach must be prudent, to ensure your benefits are secure
- The Trustees are responsible for setting the assumptions and funding plan (with advice from the Scheme actuary and support from other advisors)
- The primary focus is on the security of accrued benefits
What is an Actuarial Valuation?

- Employer contributions
- Investment returns
- Funding Shortfall
- Benefit payments: ▪ Life expectancy ▪ Inflation
- Running costs and compliance costs
The actuarial valuation – what are the liabilities?

- The promised future benefit payments to ALL members in respect of service completed before the valuation date
  - **Pensioners** - Future instalments of pensions currently in payment
  - **Deferreds** - Future benefit payments to former employees who have not yet retired
  - **Actives** - Future benefit payments to current employees in respect of service completed before the valuation date
  - **All members** - Future benefit payments to dependants
The actuarial valuation – what are the liabilities?

- Liabilities = amount of money needed now to pay these benefits over next 80 years
- Benefit payments are sensitive to inflation and mortality experience

Graph shows projected annual outgo from the Scheme (estimated using the initial valuation assumptions)

- Annual outgo is projected to increase from £5m to £7.5m in early 2030s and then slowly tail off
- Total (estimated) future outgo is approximately £300m
- Existing assets of circa £135m plus future returns plus deficit contributions must be sufficient to meet all outgo with a high degree of confidence
What assets did the Scheme have at 31 July 2016?

The total value of invested assets was £134m as at 31 July 2016.

The Trustees also held £1m in annuity policies and cash.
Future investment returns expectations

The outlook for investment returns has reduced making it more expensive to save for pension costs

Graph shows 15 year gilt yields over time

Or, the risk free return over a 15 year period

Risk free returns have fallen significantly.

Q - What is the impact of falling risk-free returns?

- If you are saving money to pay a fixed amount in 15 years’ time you need to save more....
- With a return of 5% per annum, £100 invested in early 2008 would grow to over £200 after 15 years.
- With a return of 1.66% per annum, you would need to invest £156 now to get £200 in 15 years. That’s 56% more than you needed to invest in 2008.

A - The cost of providing a given level of pension has increased significantly
The actuarial valuation – what affects the liability value?

Liabilities – impact of assumed future rate of return

Graph shows simplified cashflow where all outgo is compressed into one year with the similar duration to the actual cashflows

- The assumptions that determine the level of the cashflows can be ‘tweaked’ within acceptable ranges, but

- The critical assumption tends to be the assumed rate of return or discount rate used to place a value on the cashflows. This must be prudent.
## Valuation results

What were the main factors affecting the Scheme between 2013 and 2016?

But, the impact of lower expected returns in the future is that the Trustees need to hold £40m more than expected to provide security for your benefits.

Better than expected returns mean the assets are £15m higher than expected...

-60,000 -40,000 -20,000 0 20,000
£000s

Deficit as at 31 July 2013
Interest on liabilities less expected return on assets
Contributions in excess of the cost of accrual
Deficit Contributions received
Investment returns
Inflation/salary experience
Gain on transfers out/cash taken at retirement
Miscellaneous
Increased prudence/changes in market conditions
Deficit as at 31 July 2016

Expected items
Experience items
Changes in assumptions
What has happened since 31 July 2016?

- The Trustees have been monitoring the Scheme’s funding position.
- The position has improved significantly since 31 July 2016.
- Investment returns added £17m to the Scheme assets over the year to 31 July 2017.
- The liabilities are largely unchanged.
- The deficit reduced from £23m to £9m during the year.
What is the Trustees’ funding plan?

- The Trustees measured the deficit at 31 July 2017 rather than at 31 July 2016. This was to allow time for markets to settle following the unexpected Brexit vote in June 2016.

- This means funding a deficit of £9m rather than the £23m figure at 31 July 2016.

- The Trustees have obtained security over University properties worth £9m to provide increased security for your benefits and to provide the University with more flexibility on paying off the deficit.

- Deficit contributions will continue at current levels (£725,000 per annum) over the period to 31 January 2029.

- Future service contributions increased from 11.2% to 18.4% with effect from 1 January 2018.

- The plan has been reviewed and agreed by the Pensions Regulator.
What else is happening?

- **Assets** – having taken advice, the Trustees repositioned the Scheme assets to obtain greater diversification and to reduce the level of risk in the Scheme.

- **Benefit changes** – the University is consulting on proposed changes to the benefits provided under UASLAS in the future.
  - This will only affect benefits earned in the future and **does not affect any benefits that members have already earned**.
  - The Trustees are not involved in the consultation, which is a matter between the University and affected employees.
Important notes

- This presentation is solely for the purpose of providing information to members with respect to the triennial Scheme funding valuation as at 31 July 2016.

- It should not be relied upon for any other purpose and it should be noted that neither I nor Xafinity accept liability to any third party in respect of the contents of this presentation.

- Actuarial work carried out in connection with the Scheme funding assessment is within the scope of Technical Actuarial Standards on Data, Modelling, Reporting and Pensions issued by the Financial Reporting Council. This presentation complies with those standards.
