Snap is installed on all Windows PCs in classrooms at the University of Aberdeen. However, if you are a staff member or a Research Postgraduate, you may also want to install Snap on your University PC or laptop via the Software Center.
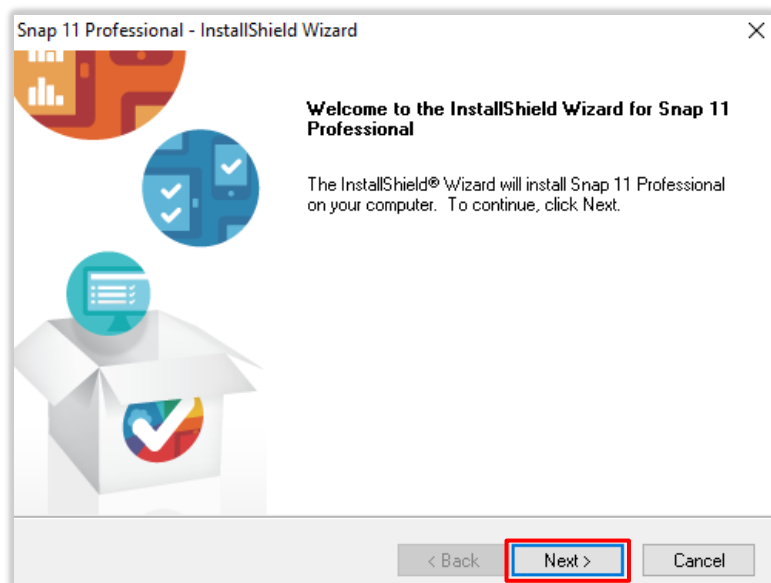

Installing Snap

1. Click the Windows start button.

2. Locate **Microsoft System Center** in your list of apps, then click **Software Center**.

3. On the **Available Software** tab, tick **Snap 11 Professional Build**.

4. At the bottom of the Sofware Center window, find the **click here** text to the right of **Help document**.

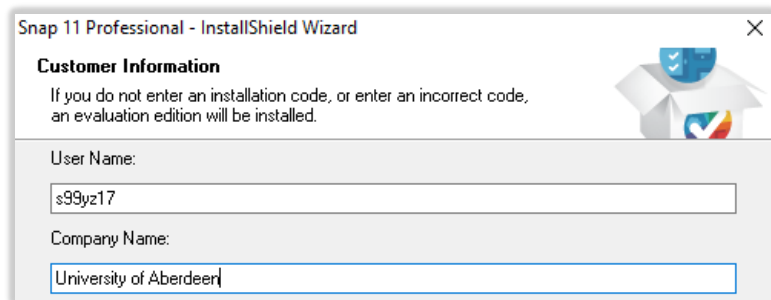

5. The **Snap 11 Professional Installation Guide** will open.
   You can minimize this for now, but you will need the installation code later.

6. In the Software Center, click **Install Selected**.

7. When the **InstallShield Wizard** opens, click **Next**.

8. When prompted for **Customer Information**, enter your University username and University of Aberdeen as the company.

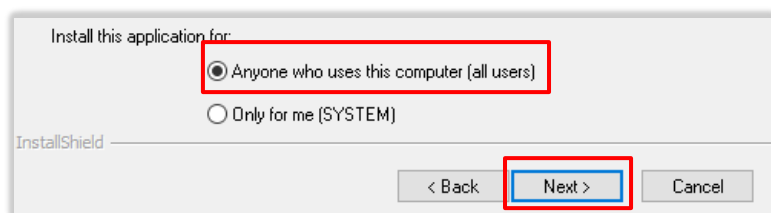

9. For the **Installation Code**, refer to the **Snap 11 Professional Installation Guide** that opened at step 5. Do not use the "copy" and "paste" shortcuts, the code requires manual input using the keyboard.

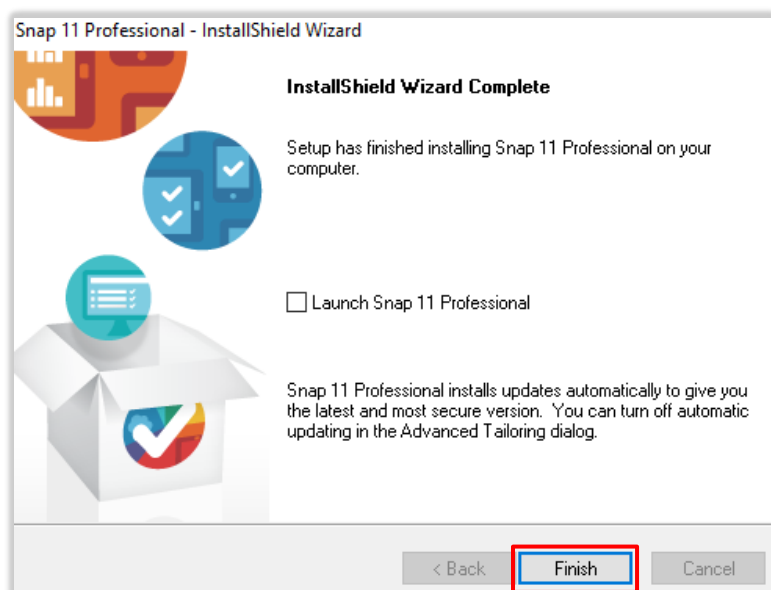

10. Ensure **Anyone who uses this computer (all users)** is selected, then click **Next**.

11. Read and accept the license agreement, then click **Next**.

12. Progress through the remainder of the installation wizard, clicking **Next**. More detailed information is available in the **Snap 11 Professional Installation Guide** that opened at step 5.

13. When installation is complete, click **Finish**.
