You can use this guide to manually configure an Android device to connect to the wireless service eduroam.

− **An automatic configuration tool XpressConnect is available online, try this first!**

The screenshots in this guide were taken from a Samsung Galaxy S6 running Android 6.0.1. Other phone models may display different menus, options and icons. Please read instructions carefully as the text on some screenshots may not be fully visible.

1. Tap the **Settings** cog icon
2. Tap **Wi-Fi**
   − Make sure Wi-Fi is **On**
3. Select **eduroam**

4. Check that Phase 2 authentication is **MSCHAPV2**
   **Note**: Android 7 devices require additional settings:
   − CA certificate: **Use system certificates**
   − Domain: **abdn.ac.uk**

5. Under **Identity**, enter:
   − **Identity**: `yourusername@abdn.ac.uk`<br>   eg `u01abc9@abdn.ac.uk`
   − Anonymous identity: `anonymous@abdn.ac.uk`
   − **Password**: `your University password`

More information is available online at [www.abdn.ac.uk/wireless](http://www.abdn.ac.uk/wireless).
