Wireless Connection – Android

You can use this guide to manually configure an Android device to connect to the wireless service eduroam.  

**Note:** If you have previous settings for eduroam press that profile and choose *Forget network*.

To ensure maximum compatibility and security with the eduroam service please try each of the two automatic online configuration tools first!

- SecureW2 ([http://www.abdn.ac.uk/wireless](http://www.abdn.ac.uk/wireless))

The screenshots in this guide were taken from a Samsung Galaxy S6 running Android 6.0.1. Other phone models may display different menus, options and icons. Please read instructions carefully.

1. Tap the **Settings** cog icon
2. Tap **Wi-Fi** - Make sure it is **On**
3. Select **eduroam**

4. Check that Phase 2 authentication is **MSCHAPV2**
   - **Plus for Android 7 & above**
   - **CA certificate**: Use system certificates (7)
   - **Do not validate (8+)**
   - **Domain**: abdn.ac.uk

5. Under **Identity**, enter:
   - **Identity**: yourusername@abdn.ac.uk
   - **Anonymous identity**: anonymous@abdn.ac.uk
   - **Password**: your University password

6. Click **Connect**
